

Calamu Data Harbor for Seagate Lyve Cloud

The Calamu Data Harbor is a robust cyberstorage solution designed to absorb ransomware attacks and automatically self-heal data. Integrating seamlessly with your preferred cloud storage, Calamu creates a secure vault for backup and recovery, eliminating data exfiltration, destruction, and loss. With Calamu, recovery from ransomware can happen in minutes rather than months.

How to connect Seagate Lyve Cloud for use with Calamu

1 Configure your storage

- From the Calamu Data Harbor Console navigate to **Storage** on the left and click **Create**
- Select **S3Compatible** from the **Cloud** dropdown
- Give your location a **Description**
- Enter the bucket **Region**
- Enter the **Bucket** name
- Enter the **Access Key** and **Secret Key**
- Enter the **Endpoint** address
- Click **Test** to confirm your configuration settings
- Click **Submit**

2 Protect files in your new vault

Your storage location has been created. You can find it in **Storage** on the Calamu Data Harbor Console from the menu on the left.
